Relevant Experience

Software Engineer · Zenegy (MCA)

2022 - Present

- Develop and maintain production-ready full-stack features across Angular and ASP.NET Core for payroll, HR, company management, and employee administration.
- Implement complex domain-driven functionality for salary calculations, vacation regulations, payroll profiles, banking integrations, and government reporting requirements.
- Build REST APIs, CQRS command/query handlers, Entity Framework Core persistence, and SQL Server data models while preserving data consistency and backward compatibility.
- Investigate production issues across distributed services and integrations by analyzing logs, reproducing edge cases, and tracing root causes end to end.
- Collaborate with product owners, QA engineers, and developers through Agile delivery, Azure DevOps, Jira, GitHub, pull requests, and code reviews.

Full-stack .NET Developer · SiteHub (MCA)

2021 - 2022

- Contributed to the early development of a construction-site logistics platform, building core backend services, frontend features, and business functionality using ASP.NET Core, Angular, and SQL Server.
- Developed CQRS command/query handlers, REST APIs, and business logic while improving existing functionality, resolving bugs, and participating in collaborative code reviews.
- Worked with senior engineers on clean architecture principles, scalable software design, and Agile engineering workflows.

Full-stack .NET Developer · Distant Point

2020 - 2021

- Contributed to an RFID-based cashless payment platform for large-scale events, implementing secure payments, card balance management, and real-time transaction handling.
- Built backend functionality and supported integration between RFID hardware and the payment platform.
- Investigated hardware-software communication issues to help ensure stable, secure, high-performance live-event operations.

Professional Focus

- Designing clean architectures and maintainable code that can evolve safely with changing business requirements.
- Taking features from concept to production across backend services, APIs, data persistence, and intuitive web experiences.
- Working closely with product, QA, and engineering teams to deliver reliable software and resolve complex production issues.

Skills

Programming Languages

C#, TypeScript, JavaScript, Python, SQL

Libraries & Frameworks

ASP.NET Core, .NET, Angular, React, Node.js, Entity Framework Core

Tools & Platforms

SQL Server, PostgreSQL, MongoDB, Docker, Azure DevOps, GitHub, Jira, CI/CD

Selected Projects

Zenegy (MCA)

Enterprise payroll and HR software supporting employee and financial workflows.

SiteHub (MCA)

Construction-site logistics and operations platform helping teams streamline delivery workflows.

Distant Point

RFID-based cashless payment solution with secure, real-time transaction handling.

Education

Seavus Academy

Full-stack Web Development (.NET)
2020 - 2021

Interests

Personal projects, machine learning, data science, and modern software architecture.
